

Advantages to using an Ecommerce Payment Gateway

- ✔ Credit and debit card transactions are preauthorized at the point of sale, greatly reducing the chance of fraudulent orders.
- ✔ Payment card data is securely transmitted and stored in a PCI compliant environment, eliminating risk and liability to your business.
- ✔ The fees charged by credit card companies are less when transactions are transmitted through a secure gateway (as opposed to being manually keyed into a store terminal).
- ✔ Seamless integration with Command Center allows you to process one or multiple transactions with a few button clicks.
- ✔ A “virtual terminal” allows you to manage your payment processing online, from anywhere in the world.
