

Guide to ARI's Payment Gateway + Payment Processing Solutions

Advantages to using an Ecommerce Payment Gateway

- Credit and debit card transactions are preauthorized at the point of sale, greatly reducing the chance of fraudulent orders.
- Payment card data is securely transmitted and stored in a PCI compliant environment, eliminating risk and liability to your business.
- The fees charged by credit card companies are less when transactions are transmitted through a secure gateway (as opposed to being manually keyed into a store terminal).
- Seamless integration with Command Center allows you to process one or multiple transactions with a few button clicks.
- A “virtual terminal” allows you to manage your payment processing online, from anywhere in the world.

Powered by
securenet™

Available to US
Merchants only

- **Only available to merchants in the US**
- **All-in-one gateway and payment processing solution**
- 24/7 live customer support
- Process payments from the SecureNet Virtual Terminal, Command Center or ADP Lightspeed 3.9.4+
- Custom AVS (Address Verification) and CVV (3-4 Digit Security Code) settings allow merchants to precisely control the level of security for their online store.
- No gateway fees. Processing fees may apply, based on the individual merchant and their volume of online sales.
